Software Developer Backend (all genders)

What you can move with us:

▪ You develop and implement technical solutions for the further development of our product together
▪ with your colleagues.
▪ You test, in collaboration with our QA experts, the features you implement.
▪ You will develop robust, scalable and high-performance backend solutions for native mobile apps.
▪ You work closely with our frontend developers to ensure seamless integration between the app and the backend.
▪ You implement security measures to ensure the confidentiality and integrity of user data.
▪ You manage and optimize databases and servers to ensure smooth app performance.
▪ You update and maintain existing backend systems to meet the latest technology and security standards.
▪ You like to stay up-to-date on advances in mobile app development and put your knowledge into practice.

What you bring along:

Necessary:

▪ Completed degree or training in the field of computer science, software engineering or similar
▪ Profound knowledge of Java
▪ Knowledge regarding REST Web Services and the usage of JSON & XML
▪ Experience in creating API's (like REST or GraphQL) and integrating other products
▪ Good English skills
▪ Very good communication skills and the ability to communicate technical concepts to a non-technical audience

Desirable:

▪ Knowledge of one of these programming languages is desirable: JavaScript, Typescript or Dart
▪ Experience with tools such as Docker, AWS, Kubernetes, Maven, Gradle, SonarQube, Git
▪ Experience with web servers like Nginx and databases like PostgreSQL
▪ Knowledge of frameworks like: Spring Boot, JUnit or JDBC
▪ Experience with CD/CI pipelines on Jenkins
▪ Experience with NoSQL databases, such as Redis, Cassandra or MongoDB
▪ Knowledge in scalability of backend systems
