## A Flexible Modular Approach to Intelligent Vehicle Transport Management

**Transport Management** is a modular system for all elements of vehicle logistics that enables you to build up a tailor-made solution for your specific transport requirements.

A powerful planning board integrates orders, trucks and drivers to optimize loads, routes and transport timing. The planning process is supported by KPIs to know the performance of the operation in advance.

Real-time visibility in execution and the integration with existing telematics systems is combined with powerful tools for efficient software supported replanning. Drivers benefit from efficient communications via driver app – dispatchers are reachable to address exceptions.

Take advantage of additional vehicle transport opportunities with minimum cost and disruption!

**Benefits of Transport Management**
> 5 % - 10 % savings in transport cost
> Know the performance of your operation in advance
> Additional transports with minimum cost and disruption
> Driver satisfaction through efficient communication
  with dispatcher

## Vehicle Logistics Solution

**Transport Management** is fully integrated with Yard Mangement and Workshop Mangagement to ensure optimization and digitalization of the entire supply chain.

### Integrated Solution

Optimization   Visibility   Automation

**Yard Management**

**Workshop Management**

# Intelligent Transport Management for Vehicle Logistics

Efficient operation and full control over all trucks, vehicles, resources, routes, and orders. Optimization and digitalization of the entire supply chain for vehicle logistics.

## Efficient planning of loads, routing and on-time delivery in one step

> Optimize operational management to support overall vehicle logistics
> Manage and ensure best profitability by KPI driven planning

## Real-time control with real-time replanning

> Ensure on-time delivery (ETA) with monitoring law regulations (e.g. driving time)
> Take advantage of additional transport opportunities with minimized disruption

## Integrated truck- and driver management

> Ensure driver satisfaction by reliable planning
> Easy communication by driver app
> Connection to existing truck-telematic system

## Invoicing

> Ensure completeness by registration of all operational orders
> Automatic generation of accurate invoicing information
