Cloud Architect / DevOps (all genders)

What you can move with us:

- You develop the technical infrastructure / cloud stack for a mobile/SaaS app and its backend.
- You choose appropriate technical means to support an efficient, reliable and cost-effective operation of the application.
- You ensure smooth operation of the application and develop it further regarding scalability, performance and security.
- You implement DevOps processes and make sure that operational requirements are addressed.
- You closely collaborate with product management and the application development team.

What you bring along:

- Completed studies or vocational training in computer science, software engineering or similar
- Professional work experience in a similar role
- Profound knowledge in AWS and/or Azure architecture, architecture options (e.g. serverless infrastructures), deployment pipelines and/or monitoring technologies (e.g. Prometheus/Grafana)
- You are familiar with container technologies like Docker, Helm and/or Kubernetes
- Very good written and verbal communication skills in English
- Interest in working in a self-organized, agile environment
